

DUCTING

Ducting tube is used to transfer air in greenhouse and industrial applications.

The clear layflat tube is supplied in common sizes to fit most duct systems found in horticultural applications.

250mm Layflat tube fits 160mm duct outlets
305mm Layflat tube fits 200mm duct outlets
480mm Layflat tube fits 300mm duct outlets
620mm Layflat tube fits 395mm duct outlets
1000mm Layflat tube fits 636mm duct outlets

Other sizes are available depending on application. Reinforced ducting sections can be made to suit demanding ducting requirements. Please ask for a quote, specifying diameter of duct to be fitted.

MULCH FILM

Mulch film is a 30mu black polyethylene film used over rows and mounds for various crops including strawberries and other field crops.

Mulch film increases soil temperatures and controls weeds. Mulch film also keeps plants and crops clean and free from soil and mud splashing which can affect the quality of the crop.

Mulch Film is available in a range of widths including 750mm, 900mm, 1200mm and 1800mm wide and in lengths of 500m per roll.

CLOCHE FILM

Cloche film is a clear polythene film used over hoops and frames to provide a microclimate or mini greenhouse effect over commercial or domestic plant and vegetable production.

The film is placed over simple hoop frames which are available commercially or can be made using wire or bamboo frames which can be bent into hoops. The hoop ends are pushed into the ground to form a long low tunnel and the film is used over the top of the frames to provide plant shelter as in a small greenhouse.

Widths available are 1200mm, 1600mm and 2000mm and in rolls lengths of 500m.

Specifications may vary from those stated in product information.
