

Micronet is a UV stabilized clear knitted polyethylene which allows air and moisture penetration while providing a controlled environment for better plant health.

Because Micronet is air and water permeable, overheating and drying out is avoided, while still giving the shelter the plants need. Protects plants from hail, rain and birds.

Ideal for establishing new lawns as it keeps birds and animals off seeded areas and gives a warm moist growing environment for the new grass.

Micronet is used for

- Crop Covers
- Enclosed growing environments
- Frost Protection
- Growth Enhancement

Micronet is a strong, light fabric with reinforced edges and is ideal for all vegetable and plant covering, making it ideal for keeping birds off crops, row covers and anywhere a controlled environment is required.

With a 15 - 20% shade factor, Micronet is ideal as a light shadecloth for plants.

Micronet is available ex stock in 2m and 4 metre widths x 50m, 100m rolls or custom sizes.

Special sizes are available on indent depending on quantity required.

Specifications may vary from those stated in product information.
