

GEOCIL FILTERFAB

Non woven filter cloth

Geocil Filterfab is a non woven drainage fabric ideal for helping to prevent silt from clogging drains

Geocil Filterfab can help to prevent silt & fines from entering and clogging drainage pipes. Geocil Filterfab can help to prevent tree roots from penetrating and forming root balls in drainage systems. The fine pores in the fabric discourage penetration by roots and grasses, making Geocil Filterfab an ideal choice for embankments and ditches where weed control & erosion control is required.

Typical installation

For wrapped or French drains, place Geocil Filterfab into the trench and place rock fill & pipes as usual. When the drain has been constructed, wrap the fabric edges back over the top before covering with soil. Geocil Filterfab can also be wrapped around perforated drainage pipes to prevent silt from clogging the pipe. To hold in place Cosio plastic pins or steel staples can be used.

Applications

- Separation fabric
- Drainage wrap
- Wrapping perforated pipe
- Filter cloth

Technical specs

- Roll width - 1m , 2m
- Roll length - 10m, 20m, 50m, 500m
- Weight - 60gsm, UV stabilised PP
- Water flow rate 60L/M2 /10 seconds
