

# LANDTEX

## Woven Soil Stabilisation Textile

**Cosio Landtex is a permeable woven geotextile separation fabric. Landtex is the ideal solution to help stabilise driveways, carparks, farm tracks and concrete slabs.**

Before laying Landtex, prepare the ground to a reasonable condition, filling ruts or holes with soil or fill. Unroll Landtex over the prepared ground and cover the fabric with hardfill. The hardfill should be spread to a minimum depth of 100mm and at no time should a digger or truck drive onto the uncovered fabric. Where joins are required, ensure a minimum of 500mm overlap.

### Applications

- Light traffic driveways
- Light traffic carparks
- Farm tracks
- Beneath concrete slabs

### Advantages

- Economical
- Prevents mud from rising to surface
- Helps to stabilise soft subsoils
- Helps to prevent the loss of hard fills

### Technical specs

- Width - 3.85m
- Roll lengths - 10m, 25m, 50m
- Grade - 118gsm +/- 5% Woven PP
- Colour - Beige or Grey
- Permeability - 8L/m2/sec

Landtex is not UV stabilised,  
avoid pro-longed exposure to sunlight
